

## XC- TRAIL: FOR THE MORE DEMANDING OFF ROAD RIDER.

At this level the design challenge is to provide maximum strength using the lightest components. XC-Trail Mountain bikes have performance light Aluminium frames including hydro-formed tubes for extra stiffness and strength, powerful disc brakes for stopping quickly downhill, the lightest performance multi-speed gear systems and the ultimate performance off-road tyres and double wall rims. Long travel front suspension is vital to ensure that the rider is in complete control in the most difficult terrain. XC-Trail bikes are designed for and by, the most demanding off-road riders.
