

MTB: FOR MOST RECREATIONAL OFF ROAD USE.

Mountain bikes have durable light weight Aluminium frames, with stiffness and strength, powerful brakes for stopping quickly, lots of gears and knobby tyres - perfect for riding off the beaten track. The riding position is semi-upright so you can see that tree you're heading for! Front suspension is very important for two reasons: firstly it's more comfortable, and secondly it lets the bike be directed when travelling downhill much more effectively. These bikes also need performance off road tyres paired with strong double wall rims to ensure they can cope with difficult terrain.

Trailridge

Model No: 0106

claud butler

bike products 2010

MTB Series

Trailridge gains over Pinelake

- >> SR Suntour M2025A with pre-load adjust suspension fork
